TAKE A CLOSER LOOK AT CARTONS: OUR RESPONSIBLE PACKAGING STORY

75% or more of any Evergreen Packaging® carton is made with fiber from trees grown in forests where responsible forestry practices are used.

More than half the energy that fuels Evergreen Packaging's manufacturing process is from biomass. Biomass energy is renewable.

Evergreen Packaging sources renewable materials responsibly by maintaining three forestry certifications and conducting annual third-party audits.

Cartons are recyclable. Recycle your cartons so other paper-based products can be made.
